

Solimar® Print Director™ Enterprise (SPDE)

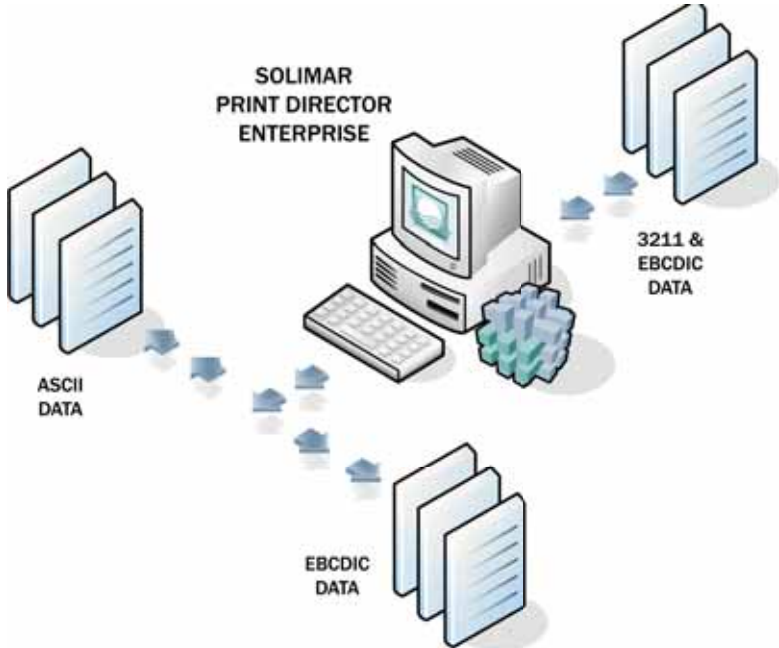

3211::ASCII Conversion Module

Overview

The 3211::ASCII module converts 3211 line printer data into ASCII data for printing application on PCL or PostScript printers. The module also translates the EBCDIC character set to ASCII for printing mainframe channel data onto production or distributed network printers.

The 3211::ASCII module converts variable records containing 3211 carriage control into ASCII data and translates EBCDIC code pages into ASCII according to rules established by the operator.

Technical Specifications

- Converts 3211 carriage control data (mainframe) into ASCII (desktop printer)
- Translates EBCDIC character set into the ASCII character set
- Supports a user-defined character map translation tables
- Supports user defined FCB assignments
- Supports user defined top and bottom of form positions

Component

- 3211::ASCII module
 - Included with Base System
