

Solimar® Print Director™ Enterprise (SPDE)

Disk Spooler Connectivity Module

Overview

The Disk Spooler module names and writes files received from any SPDE input module to disk drives for further processing. This module captures print data to disk for job management, efficient printing, archiving and the sharing of printer resources among several host computers. Files may be appended together, automatically redirected to multiple directories, and named with useful information for tracking and routing.

The Disk Spooler module features a file redirection operation, in which jobs are sent to specified directories based on filters that compare the attributes with conditional criteria. When the job attributes meet the criteria, it is sent to the specified directory for printing, converting, archiving, viewing, or deletion. The module can include over twenty job attributes obtained from the input, emulation, and Job Separator module(s) when naming spool files.

Technical Specifications

- Writes files to disk drives
- Captures data from networks and host systems where otherwise impossible
- Names files for routing or for use with other applications.
- Supports file naming information including: job name, job size, job copies, job type, job ID, job description, form name, page count, host name, host type, job pages, class name, account name, user name, JDE name, JDL name, volume I/O, FCB name, local host name and destination type
- Supports customization of what file naming information is included in spool file names
- Automatically redirects files to different directories based on job name
- Appends multiple files based on number of jobs, cumulative file size, file name, or a timeout value
- Supports user defined class specification
- Supports user defined job naming
- Supports Windows® long file names
- Provides automatic job recovery to keep or delete cancelled jobs

Component

- Disk Spooler module
- Included with Base System

Solimar® Print Director™ Enterprise (SPDE)

Enterprise Output Management Solution

The Solimar Print Director Enterprise is a client-server-based enterprise output management solution designed to improve the performance of production output processes and optimize management control.

Utilizing advanced technology, Solimar Print Director Enterprise combines multi-level security, remote administrator and operator access, event logging and notification, direct device connectivity capabilities, powerful job routing and tracking with industry-leading data stream transformations.

About Solimar Systems, Inc.

Founded in 1991, Solimar Systems, Inc. is a leading developer of enterprise output management solutions for digital document creation, production and distribution. Installed in thousands of sites around the world, including nearly 50% of the Fortune 100, Solimar solutions satisfy a wide range of requirements by combining integrated connectivity, data stream transforms and optimizations, document re-engineering/repurposing and sophisticated print queue management with secure web-based document presentment, distribution and tracking.

Experts in legacy and modern data streams, Solimar solutions provide essential infrastructure to a variety of industries including insurance, financial services, banking, pharmaceutical, telecommunications, healthcare, government, education, retail, manufacturing, utilities, distribution and print service bureaus.
