

## Solimar® Print Director™ Enterprise (SPDE)

### TCP/IP Connectivity Modules

#### Overview

The TCP/IP modules receive and send data from the server via several TCP/IP communication protocols. The modules support lpr, lpd, and Unix direct socket or port protocols. TCP/IP is commonly used to transmit print data from Windows®, Unix, mainframes and internet systems. These modules take advantage of lpr/lpd control files to provide job naming information for tracking, processing and distribution of data.

Most modern network printers support receiving print data via TCP/IP lpr, but some host systems use direct socket or port protocol to send print data. The TCP/IP modules can be used to provide a gateway between these protocols to enable direct socket or port support on lpd printers.

#### Technical Specifications

- Receives data via lp, lpd, lpr, and direct socket or port protocols
- Sends data via FTP, lp, lpr, and direct socket or port protocols
- Supports an unlimited number of print queues
- Supports multiple lpr protocols to match various printers capabilities
- Emulates a remote TCP/IP Unix host
- Emulates IBM line printers and TCP/IP Unix printers
- Supports System V and BSD version of the Unix operating system
- Supports DHCP
- Generates control file with information from data
- Control file information from host is used for job naming, tracking and routing
- Provides direct socket or port input to LPR output gateway solution
- Allows for user-defined port number for lpd protocol

#### Components

- TCP/IP input module communication software
- TCP/IP output module communication software
- Modules are licensed separately

## Solimar® Print Director™ Enterprise (SPDE)

### Enterprise Output Management Solution

The Solimar Print Director Enterprise is a client-server-based enterprise output management solution designed to improve the performance of production output processes and optimize management control.

Utilizing advanced technology, Solimar Print Director Enterprise combines multi-level security, remote administrator and operator access, event logging and notification, direct device connectivity capabilities, powerful job routing and tracking with industry-leading data stream transformations.

### About Solimar Systems, Inc.

Founded in 1991, Solimar Systems, Inc. is a leading developer of enterprise output management solutions for digital document creation, production and distribution. Installed in thousands of sites around the world, including nearly 40% of the Fortune 100, Solimar solutions satisfy a wide range of requirements by combining integrated connectivity, data stream transforms and optimizations, document re-engineering/repurposing and sophisticated print queue management with secure web-based document presentation, distribution and tracking.

Experts in legacy and modern data streams, Solimar solutions provide essential infrastructure to a variety of industries including insurance, financial services, banking, pharmaceutical, telecommunications, healthcare, government, education, retail, manufacturing, utilities, distribution and print service bureaus.
