SOLITRACK™ – DATABASE-DRIVEN JOB TRACKING

SOLitrack is a database-centric output management system that controls and tracks print files. Designed to manage high volume transactional printing workflows, SOLitrack provides a number of features that simplify job routing, security, print status, and accounting in production data centres and distributed print environments.

SOLitrack can directly ingest print files and determine the processing rules as to the best match for when where and how the job should be processed. SOLitrack also has the unique capability of monitoring printer activity for jobs not directly managed by the system. For companies with large deployments of distributed printers this provides for a centralised method to monitor printer activity for management, productivity and billing activities. SOLitrack's reporting and centralised monitoring of printers and output devices is a key component to Automated Document Factory (ADF) workflows.

SOLITRACK KEY FEATURES & BENEFITS

SECURE LOGIN FOR OPERATOR IDENTIFICATION

SOLitrack secures content by constraining operator views and control to 'Job Groups'. An Administrator establishes which ActiveDirectory users are allowed access to a Job Group, as well as the tasks that such users can perform as operators.

PAGE COUNTING

A common challenge in production data centres is accounting for print activity to bill clients. SOLitrack provides the ability to count pages of incoming content, to recover page counts from target devices, and to report this information from the SQL database for billing, tracking device and operator activity.

CUSTOMISABLE REPORTING

SOLitrack is built on a robust database platform that logs events within the system as well as printer activity. The reporting capabilities give users the flexibility to create reports that are relevant to the specific information they need such as device and operator productivity, billing for printer usage and job tracking.

LIVE PRINTER STATUS - IPP

Supporting an active dialogue with attached devices to assure connectivity and to track job completion, SOLitrack implements IPP and SNMP printing protocols.

FILE TYPE DETECTION

Key to automating workflows is SOLitrack's ability to detect print files by type (PDF, AFPDS, IPDS, PCL, PostScript) along with Job Tickets that may be prepended to them.

INTEGRATION WITH SOLIMAR SUITE OF SOLUTIONS

Leveraging the numerous connectivity and datastream conversion capabilities of Solimar Print Director Enterprise (SPDE), SOLitrack provides the capability to directly connect to SPDE as an input. In addition, SOLitrack utilises SOLFusion for automating re-engineering (Rubika), accessibility (Accessibility Engine), redaction (Redaction Engine), indexing (Solimar Indexing Tools), and archiving (SOLsearcher Enterprise) workflows.

SOLITRACK MOBILE - YOUR DOCUMENT GPS

Would you like to know exactly where a job is in the production lifecycle? Need to oversee operations from your facilities from the palm of your hand? No problem. SOLitrack is like a GPS system for your documents. It tracks job statuses and current conditions of all your production print workflows. This information can be delivered to your mobile device through SOLitrack Mobile to easily manage your SLA and priority schedules, track job status and monitor devices. With a preference-based alert and notification system along with custom reporting, SOLitrack Mobile can keep you in the know while you're on the go!

Quickly find jobs based on location, job status, or through configurable search filters.

Monitor a job's status, messages, and details as it progresses through its assigned workflow.

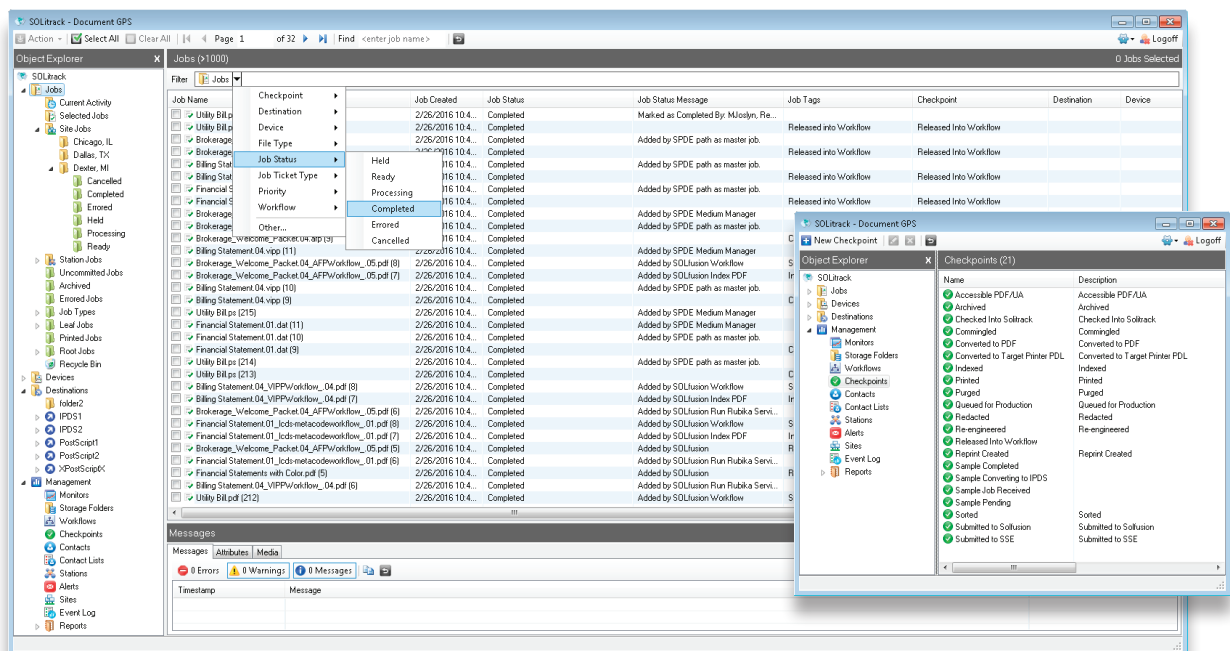

Receive alerts and notifications to stay on top of all production & SLA activities.

Track jobs as they pass through predefined workflow checkpoints.

Preview an archived version of a job with SOLsearcher Enterprise integration.

SOLITRACK USER INTERFACE

SOLitrack is a .NET application that deploys an Operator GUI, making the administration and deployment of SOLitrack seamless to users. The GUI allows Operators to filter and select jobs, hold/release/cancel jobs, set job attributes and destinations (based on security permissions), and track the results of their operations.

LOAD BALANCING AND FAILOVER

In both production and distributed environments, clients often want to be able to redirect print away from devices that are not operative or have a backlog of work. SOLitrack supports automatic redirection of print based on rules and device conditions. In turn, this capability improves production efficiency.

WORKFLOWS & CHECKPOINTS

To track jobs through the system, SOLitrack utilizes user-defined processing activities that are grouped into workflows. These workflows are a collection of checkpoints that provide a progress indicator to simplify the tracking of jobs and emphasise only the most important tasks as a job progresses through the workflow.

ENTERPRISE PRINT & DOCUMENT DELIVERY SOLUTIONS

With more than 45,000 products installed in thousands of sites worldwide, Solimar Systems is a leading provider of document delivery solutions for transactional/POD production printing environments and online web presentment.

Database-centric job management system with a web-based interface to drive printers and control Solimar systems to track and monitor job security, routing and device statuses.

Client-server-based output management solution combining integrated connectivity with fast, accurate print stream conversions, and powerful job routing/tracking capabilities.

Modular document re-engineering and post-composition solution that can be configured to automate manual processes, enable postal savings, add value to documents, and dynamically modify print data.

Automates output production tasks to support business-critical processes such as external processes & scripts, indexing PDF documents, and executing Rubika® configurations.

Powerful PDF indexing tools that provide methods to quickly design, test and manage indexing templates for data extraction. Works as stand-alone product or with SOLsearcher™ and Rubika®.

Scalable and secure electronic document delivery solution that enables organisations to index, store, search and retrieve large collections of transactional and scanned documents.

ABOUT SOLIMAR SYSTEMS, INC.

Solimar Systems is a leading developer of Customer Communication Management and Delivery solutions. Our solutions provide clients visibility into their workflows and operations while driving costs down; track the lifecycle of jobs from receipt to multi-channel distribution; optimise and convert data and documents; manage and optimise production printing across facilities and enable secure access and compliance. We also drive value and revenue generating opportunities by adding dynamic, conditional messaging to documents via digital inserts, onserts and augmented reality (AR) experiences. With thousands of clients worldwide, including 70% of the Fortune 100, Solimar has integral, proven IT solutions that have benefited print and data centres for more than 25 years.
