SOLITRACK[™] - DATABASE-DRIVEN JOB TRACKING

SOLitrack is a database-centric output management system designed for high volume transactional printing workflows. SOLitrack provides a number of features that simplify job routing, security, print status, and accounting in production data centers and distributed print environments. This solution's API supports registering and updating job status information for jobs not directly managed by the system, providing organizations with a centralized method to monitor workflow activity for management, productivity and billing activities. SOLitrack's reporting and monitoring of printers and output devices is a key component to Automated Document Factory (ADF) workflows.

SOLITRACK KEY FEATURES & BENEFITS

SECURE LOGIN FOR OPERATOR IDENTIFICATION

SOLitrack secures content by constraining operator views and control to 'Job Groups'. An Administrator establishes which ActiveDirectory users are allowed access to a Job Group, as well as the tasks that such users can perform as operators.

FILE TYPE DETECTION

Key to automating workflows is SOLitrack's ability to detect print files by type (PDF, AFPDS, IPDS, PCL, PostScript) along with Job Tickets that may be prepended to them.

JOB BATCHING

The Job Batching Module combines jobs with similar characteristics into larger batch jobs, sorts and optimizes mailpieces for greater operational efficiency and cost savings, all while honoring Service Level Agreements (SLAs). This batching workflow facilitates householding, commingling, tracking, managing SLAs, and automation of manual processes.

PAGE COUNTING

SOLitrack provides the ability to count pages of incoming content, to recover page counts from target devices, and to report this information from the SQL database for billing, tracking device and operator activity.

JDF/JMF PRINTER INTEGRATION

SOLitrack supports Job Description Format (JDF) and Job Messaging Format (JMF) to provide real-time job and printer status, log job processing information, and facilitate communication for non-IPDS printers to return live job status information.

LIVE PRINTER STATUS - IPP

Supporting an active dialogue with attached devices to assure connectivity and to track job completion, SOLitrack implements IPP and SNMP printing protocols.

CUSTOMIZABLE REPORTING

SOLitrack is built on a robust database platform giving users the flexibility to create custom reports such as device and operator productivity, billing for printer usage and job tracking.

INTEGRATION WITH SOLIMAR SUITE OF SOLUTIONS

SOLitrack provides the capability to directly connect to Solimar Print Director Enterprise (SPDE) for transforms, SOLfusion and Rubika for automating re-engineering, Solimar Indexing Tools including Accessibility and Redaction Engines, and SOLsearcher Enterprise (SSE) archiving workflows.

SOLITRACK MOBILE - YOUR DOCUMENT GPS

Would you like to know exactly where a job is in the production lifecycle? Need to oversee operations from your facilities from the palm of your hand? No problem. SOLitrack is like a GPS system for your documents. It tracks job statuses and current conditions of all your production print workflows. This information can be delivered to your mobile device through SOLitrack Mobile to easily manage your SLA and priority schedules, track job status and monitor devices. With a preference-based alert and notification system along with custom reporting, SOLitrack Mobile can keep you in the know while you're on the go!

SOLITRACK USER INTERFACE

SOLitrack is a .NET application that deploys an Operator GUI, making the administration and deployment of SOLitrack seamless to users. The GUI allows Operators to filter and select jobs, hold/release/cancel jobs, set job attributes and destinations (based on security permissions), and track the results of their operations.

LOAD BALANCING AND FAILOVER

In both production and distributed environments, clients often want to be able to redirect print away from devices that are not operative or have a backlog of work. SOLitrack supports automatic redirection of print based on rules and device conditions. In turn, this capability

improves production efficiency.

WORKFLOWS & CHECKPOINTS

To track jobs through the system, SOLitrack utilizes user-defined processing activities that are grouped into workflows. These workflows are a collection of checkpoints that provide a progress indicator to simplify the tracking of jobs and emphasize only the most important tasks as a job progresses through the workflow.

ENTERPRISE PRINT & DOCUMENT DELIVERY SOLUTIONS

With more than 45,000 products installed in thousands of sites worldwide, Solimar Systems is a leading provider of document delivery solutions for transactional/POD production printing environments and online web presentment.

Database-centric job management system with a web-based interface to drive printers and control Solimar systems to track and monitor job security, routing and device statuses.

Client-server-based output management solution combining integrated connectivity with fast, accurate print stream conversions, and powerful job routing/tracking capabilities.

Modular document re-engineering and postcomposition solution that can be configured to automate manual processes, enable postal savings, add value to documents, and dynamically modify print data.

Automates output production tasks to support business-critical processes such as external processes & scripts, indexing PDF documents, and executing Rubika® configurations.

Powerful PDF indexing tools that provide methods to quickly design, test and manage indexing templates for data extraction. Works as stand-alone product or with SOLsearcher[™] and Rubika[®].

Scalable and secure electronic document delivery solution that enables organizations to index, store, search and retrieve large collections of transactional and scanned documents.

ABOUT SOLIMAR SYSTEMS, INC.

Solimar Systems enables organizations around the globe to onboard, make ready, enhance, manage and deliver print and digital communications. As an early adopter of the PDF output format, our Chemistry[™] platform optimizes and drives a variety of print and electronic workflows including transactional and direct mail printing, accessibility, archive services, digital delivery and secure communications. For over 30 years, Solimar continues to deliver critical infrastructures to the high-volume digital printing industry. Our clients' case studies and testimonials demonstrate our significant ROI and world-class support.
